

Secondary outcomes – Post-intervention research data collection

Each SEA-ORCHID site will review a summary of the research data provided for research projects, clinical trials and Cochrane systematic reviews at baseline (July to October 2005) and provide a status update.

Sites will also collect data via individual data sheets on research projects, clinical trials and Cochrane systematic reviews that have been commenced since the baseline data collection period and were either:

- started and completed within 2006/2007, or are
- underway at each intervention site during February to April 2008.

The data collection periods for research activity are as follows:

1. and 2. = provide update via baseline summary review form

3. and 4. = complete individual data sheet

Forms to be downloaded (www.seaorchid.org/knowledgebank)

- Research data collection instructions
- NEW research data forms
- Baseline research data review - (for your country)

Completed forms are to be returned to Nathaleeya Narash, Natthaleeya_n@yahoo.com, **by the first week of May 2008.**

For any questions re data collection, please contact either Steve McDonald, steve.mcdonald@med.monash.edu.au, or Melissa Thomas, mthomas@usyd.edu.au.
